

SCHOOL OF COMPUTER APPLICATIONS

## PROJECT

**NO SQL and DBaaS 101 (NO SQL)**  
**(BCADSN13202)**

**Submitted By:-**

Name – Ajay Chauhan

Section – BCADS21

Roll Number – 1240258047

**Submitted To:-**

Mr. Ankit Verma

# PROJECT

## 1. Complex Filters & Projections

**Q1:** - List the names and departments of students who have more than 85% attendance and are skilled in both "MongoDB" and "Python".

**Query:** -

```
db.students_full.find(  
  { attendance: { $gt: 85 }, skills: { $in: ["MongoDB", "Python"] } })
```

**Output:** -

```
Atlas atlas-idr26g-shard-0 [primary] project> db.students_full.find(      //Name: Ajay Chahuhan, Registration No: 1240258047  
... { attendance: { $gt: 85 }, skills: { $in: ["MongoDB", "Python"] } })  
Atlas atlas-idr26g-shard-0 [primary] project> |
```

- Nothing will show up because there aren't any students who have both 'MongoDB' and 'Python' skills and more than 85% attendance.
- Use **comparison operators** like \$gt (greater than).
- Apply **array matching** with \$all to ensure multiple elements exist.
- Use **projection** to show only required fields.
- Build **compound filters** using multiple conditions.

**Q2:** - Show all faculty who are teaching more than 2 courses. Display their names and the total number of courses they teach.

**Query:** -

```
db.faculty_full.aggregate(  
[ { $project: { name: 1, totalCourses: { $size: "$courses" } } },  
{ $match: { totalCourses: { $gt: 2 } } } ])
```

**Output:** -

```
Atlas atlas-idr26g-shard-0 [primary] project> db.faculty_full.aggregate( //Name: Ajay Chahuhan, Registration No: 1240258047  
... [ { $project: { name: 1, totalCourses: { $size: "$courses" } } },  
... { $match: { totalCourses: { $gt: 2 } } } ] )  
[  
{ _id: 'F029', name: 'Charles Newton', totalCourses: 3 },  
{ _id: 'F032', name: 'Julia Cole', totalCourses: 3 },  
{ _id: 'F040', name: 'Darrell Velasquez', totalCourses: 3 },  
{ _id: 'F048', name: 'Michael Poole', totalCourses: 3 },  
{ _id: 'F051', name: 'John Duran', totalCourses: 3 },  
{ _id: 'F061', name: 'Daniel Allen', totalCourses: 3 },  
{ _id: 'F083', name: 'Matthew Hanna', totalCourses: 3 },  
{ _id: 'F084', name: 'Michael Johnson', totalCourses: 3 },  
{ _id: 'F100', name: 'Robert Lara', totalCourses: 3 }  
]  
Atlas atlas-idr26g-shard-0 [primary] project> |
```

- Use \$project to create computed fields.
- Use \$size to count array elements.
- Combine \$match after projection for conditional filtering.
- Understand aggregation pipelines.

## 2. Joins (\$lookup) and Aggregations

**Q3:** - Write a query to show each student's name along with the course titles they are enrolled in (use \$lookup between enrollments, students, and courses).

**Query:** -

```
db.enrollments_full.aggregate(  
[ { $lookup: { from: "students_full", localField: "student_id", foreignField: "_id",  
as: "student_info" } },  
{ $unwind: "$student_info" }, { $lookup: { from: "courses_full", localField: "course_id",  
foreignField: "_id", as: "course_info" } },  
{ $unwind: "$course_info" }, { $project: { _id: 0, student_name: "$student_info.name",  
course_title: "$course_info.title" } } ])
```

**Output:-**

```
Atlas atlas-idr26g-shard-0 [primary] project> db.enrollments_full.aggregate( //Name: Ajay Chauhan, Registration No:- 1240258047  
... [{ $lookup: { from: "students_full", localField: "student_id", foreignField: "_id", as: "student_info" } },  
... { $unwind: "$student_info" }, { $lookup: { from: "courses_full", localField: "course_id", foreignField: "_id", as: "course_info" } },  
... { $unwind: "$course_info" }, { $project: { _id: 0, student_name: "$student_info.name", course_title: "$course_info.title" } } ]  
[  
  {  
    student_name: 'Alexandra Bailey',  
    course_title: 'Reactive neutral adapter'  
  },  
  {  
    student_name: 'Megan Taylor',  
    course_title: 'Sharable bifurcated paradigm'  
  },  
  {  
    student_name: 'Alejandro Hart',  
    course_title: 'Focused user-facing paradigm'  
  },  
  {  
    student_name: 'Timothy Sparks',  
    course_title: 'Focused user-facing paradigm'  
  },  
  {  
    student_name: 'Juan Morris',  
    course_title: 'Balanced asynchronous framework'  
  },  
  {  
    student_name: 'Donna Morgan',  
    course_title: 'Organic optimal product'  
  },  
  {  
    student_name: 'Patricia Scott',  
    course_title: 'Fully-configurable responsive solution'  
  },  
  {  
    student_name: 'Carolyn Chandler',  
    course_title: 'Horizontal attitude-oriented knowledgebase'  
  },
```

- Use \$lookup for joins between collections.
- Combine multiple \$lookups for complex relationships.
- Use \$arrayElemAt to extract single values from arrays.
- Understand MongoDB's relational-like linking.

**Q4:** - For each course, display the course title, number of students enrolled, and average marks (use \$group).

**Query:** -

```
db.enrollments_full.aggregate(  
[ { $group: { _id: "$course_id", total_students: { $sum: 1 }, avg_marks: { $avg: "$marks" } } },  
  { $lookup: { from: "courses_full", localField: "_id", foreignField: "_id", as: "course_info" } },  
  { $unwind: "$course_info" },  
  { $project: { _id: 0, course_title: "$course_info.title", total_students: 1, avg_marks: { $round:  
    ["$avg_marks", 2] } } } ])
```

**Output:-**

```
Atlas atlas-idr26g-shard-0 [primary] project> db.enrollments_full.aggregate( //Name: Ajay Chauhan, Registration No.: 1240258047  
... [{ $group: { _id: "$course_id", total_students: { $sum: 1 }, avg_marks: { $avg: "$marks" } } },  
... { $lookup: { from: "courses_full", localField: "_id", foreignField: "_id", as: "course_info" } },  
... { $unwind: "$course_info" },  
... { $project: { _id: 0, course_title: "$course_info.title", total_students: 1, avg_marks: { $round: ["$avg_marks", 2] } } } ])  
[  
  {  
    total_students: 2,  
    course_title: 'Customer-focused cohesive info-mediaries',  
    avg_marks: 76.5  
  },  
  {  
    total_students: 1,  
    course_title: 'Open-architected tangible protocol',  
    avg_marks: 82  
  },  
  {  
    total_students: 1,  
    course_title: 'Realigned scalable extranet',  
    avg_marks: 71  
  },  
  {  
    total_students: 2,  
    course_title: 'Integrated fault-tolerant task-force',  
    avg_marks: 68.5  
  },  
  {  
    total_students: 2,  
    course_title: 'Persistent static migration',  
    avg_marks: 64  
  },  
  {  
    total_students: 3,  
    course_title: 'Focused user-facing paradigm',  
    avg_marks: 67.67  
  },  
]
```

- Use \$group for summarizing data.
- Use \$avg and \$sum to calculate aggregates.
- \$unwind helps to deconstruct arrays.
- \$project to rename and structure output.

### 3. Grouping, Sorting, and Limiting

**Q5:** - Find the top 3 students with the highest average marks across all enrolled courses.

**Query:** -

```
db.enrollments_full.aggregate(  
[ { $group: { _id: "$student_id", avg_marks: { $avg: "$marks" } } },  
{ $sort: { avg_marks: -1 } },  
{ $limit: 3 },  
{ $lookup: { from: "students_full", localField: "_id", foreignField: "_id", as: "student_info" } },  
{ $unwind: "$student_info" },  
{ $project: { _id: 0, student_name: "$student_info.name", avg_marks: { $round: ["$avg_marks", 2] } } } ])
```

**Output:-**

```
Atlas atlas-idr26g-shard-0 [primary] project> db.enrollments_full.aggregate( //Name: Ajay Chauhan, Registration No.: - 1240258047  
... [{ $group: { _id: "$student_id", avg_marks: { $avg: "$marks" } } } ],  
... { $sort: { avg_marks: -1 } },  
... { $limit: 3 },  
... { $lookup: { from: "students_full", localField: "_id", foreignField: "_id", as: "student_info" } },  
... { $unwind: "$student_info" },  
... { $project: { _id: 0, student_name: "$student_info.name", avg_marks: { $round: ["$avg_marks", 2] } } } ] )  
[  
  { student_name: 'Diane Phillips', avg_marks: 100 },  
  { student_name: 'Brandon Rios', avg_marks: 98 },  
  { student_name: 'Larry Ramsey', avg_marks: 94 }  
]  
Atlas atlas-idr26g-shard-0 [primary] project> |
```

- \$sort sorts data in ascending/descending order.
- \$limit restricts results to top records.
- \$group for calculating averages.
- Combining joins with grouping.

**Q6:** - Count how many students are in each department. Display the department with the highest number of students.

### Query:-

```
db.students_full.aggregate([{$group: { _id: "$department", totalStudents: { $sum: 1 }}}, {$sort: { totalStudents: -1 }}, {$limit: 1}, {$project: { _id: 0, department: "$_id", totalStudents: 1 }}])
```

### Output:-

```
Atlas atlas-1dr26g-shard-0 [primary] project> db.students_full.aggregate( //Name: Ajay Chauhan, Registration No.: - 1240258047
... [{ $group: { _id: "$department", totalStudents: { $sum: 1 }}}, ...
... { $sort: { totalStudents: -1 }}, ...
... { $limit: 1 },
... { $project: { _id: 0, department: "$_id", totalStudents: 1 }}])
[ { totalStudents: 23, department: 'Electrical' } ]
Atlas atlas-1dr26g-shard-0 [primary] project> |
```

- Count items per category with \$sum: 1.
- Use \$sort to rank results.
- Identify top-performing or most populated groups.
- Apply \$limit to get top results.

## 4. Update, Upsert, and Delete

**Q7:** - Update attendance to 100% for all students who won any "Hackathon".

**Query:** -

```
db.students_full.updateMany(  
  { activities: "Hackathon" },  
  { $set: { attendance: 100 } })
```

**Output:-**

```
Atlas atlas-idr26g-shard-0 [primary] project> db.students_full.updateMany( //Name: Ajay Chauhan, Registration No:- 1240258047  
... { activities: "Hackathon" };  
... { $set: { attendance: 100 } })  
{  
  acknowledged: true,  
  insertedId: null,  
  matchedCount: 0,  
  modifiedCount: 0,  
  upsertedCount: 0  
}  
Atlas atlas-idr26g-shard-0 [primary] project> |
```

- Use updateMany() for bulk updates.
- \$set modifies specific fields.
- Target documents via **nested fields**.
- Understand bulk updates with filters.

**Q8:** - Delete all student activity records where the activity year is before 2022.

**Query:** -

```
db.activities_full.deleteMany(  
  { year: { $lt: 2022 } })
```

**Output:-**

```
Atlas atlas-idr26g-shard-0 [primary] project> db.activities_full.deleteMany( //Name: Ajay Chauhan, Registration No:- 1240258047  
... { year: { $lt: 2022 } })  
{ acknowledged: true, deletedCount: 0 }  
Atlas atlas-idr26g-shard-0 [primary] project> |
```

- Delete records conditionally using deleteMany().
- \$lt filters by less than a value.
- Manage dataset cleanup.
- Apply conditional data management.

**Q9:** - Upsert a course record for "Data Structures" with ID "C150" and credits 4—if it doesn't exist, insert it; otherwise update its title to "Advanced Data Structures".

**Query:** -

```
db.courses_full.updateOne(  
  { _id: "C150" },  
  [ { $set: { title: { $cond: [ { $eq: ["$title", null] }, "Data Structure", "Advanced Data Structures" ] },  
            credits: { $ifNull: ["$credits": 4] } } },  
    { upsert: true } ]
```

**Output:-**

```
Atlas atlas-idr26g-shard-0 [primary] project> db.courses_full.updateOne( //Name: Ajay Chauhan, Registration No:- 1240258047  
... { _id: "C150" },  
... [ { $set: { title: { $cond: [ { $eq: ["$title", null] }, "Data Structures", "Advanced Data Structures" ] }, credits: { $ifNull: ["$credits", 4] } } } ],  
... { upsert: true } ]  
...  
{  
  acknowledged: true,  
  insertedId: null,  
  matchedCount: 1,  
  modifiedCount: 0,  
  upsertedCount: 0  
}  
Atlas atlas-idr26g-shard-0 [primary] project> |
```

- `upsert: true` inserts if no match is found.
- `$setOnInsert` applies only when inserting new data.
- `$set` updates fields if record exists.
- Handle both **insert** and **update** in one command.

## 5. Array & Operator Usage

**Q10:** - Find all students who have "Python" as a skill but not "C++".

**Query:** -

```
db.students_full.find(  
  { $and: [{ skills: "Python" }, { skills: { $ne: "C++" } }]})
```

**Output:-**

```
Atlas atlas-idr26g-shard-0 [primary] project> db.students_full.find( //Name: Ajay Chauhan, Registration No:- 1240258047  
... { $and: [{ skills: "Python" }, { skills: { $ne: "C++" } }]})  
...  
[  
  {  
    _id: 'S004',  
    name: 'Kyle Hale',  
    dob: '2000-10-20',  
    department: 'Electrical',  
    skills: [ 'Python', 'Java' ],  
    attendance: 79.78  
  },  
  {  
    _id: 'S008',  
    name: 'Cody Whitehead',  
    dob: '2003-11-25',  
    department: 'Biotechnology',  
    skills: [ 'JavaScript', 'Python' ],  
    attendance: 92.03  
  },  
  {  
    _id: 'S009',  
    name: 'Thomas Jackson',  
    dob: '2002-10-25',  
    department: 'Electrical',  
    skills: [ 'Python', 'AutoCAD' ],  
    attendance: 96.64  
  },  
  {  
    _id: 'S012',  
    name: 'Steven Wong',  
    dob: '2003-09-06',  
    department: 'Biotechnology',  
    skills: [ 'MongoDB', 'Python' ],  
    attendance: 77.17  
  },  
]
```

- \$in checks for presence in arrays.
- \$nin checks for absence in arrays.
- Combine both for exclusive conditions.
- Operate effectively on array fields.

**Q11:** - Return names of students who participated in "Seminar" and "Hackathon" both.

**Query:** -

```
db.activities_full.aggregate(  
[ { $group: { _id: "$student_id", activityTypes: { $addToSet: "$type" } } },  
{ $match: { activityTypes: { $all: ["Seminar", "Hackathon"] } } },  
{ $lookup: { from: "students_full", localField: "_id", foreignField: "_id", as: "student_info" } },  
{ $unwind: "$student_info" },  
{ $project: { _id: 0, name: "$student_info.name" } } ])
```

**Output:-**

```
Atlas atlas-idr26g-shard-0 [primary] project> db.activities_full.aggregate( //Name: Ajay Chauhan, Registration No:- 1240258047  
... [ { $group: { _id: "$student_id", activityTypes: { $addToSet: "$type" } } },  
... { $match: { activityTypes: { $all: ["Seminar", "Hackathon"] } } },  
... { $lookup: { from: "students_full", localField: "_id", foreignField: "_id", as: "student_info" } },  
... { $unwind: "$student_info" },  
... { $project: { _id: 0, name: "$student_info.name" } } ] )  
[  
{ name: 'Taylor Webb' },  
{ name: 'Patricia Scott' },  
{ name: 'Adam Solomon' },  
{ name: 'Lydia Day' },  
{ name: 'Carlos Bryant' }  
]  
Atlas atlas-idr26g-shard-0 [primary] project> |
```

- \$all ensures all specified elements exist in an array.
- Simple array querying in MongoDB.
- Combine multiple filters in a single query.
- Efficient participation tracking.

## 6. Subdocuments and Nested Conditions

**Q12:** - Find students who scored more than 80 in "Web Development" only if they belong to the "Computer Science" department.

**Query:** -

```
db.enrollments_full.find(  
  { course_title: "Web Development", marks: { $gt: 80 }, department: "Computer Science" })
```

**Output:-**

```
Atlas atlas-idr26g-shard-0 [primary] project> db.enrollments_full.find( //Name: Ajay Chauhan, Registration No:- 1240258047  
... { course_title: "Web Development",marks: { $gt: 80 }, department: "Computer Science" } )  
...  
...  
Atlas atlas-idr26g-shard-0 [primary] project> |
```

- Nothing will show up because there are no students in the Computer Science department who scored more than 80 in 'Web Development'.
  - Access nested fields using dot notation.
  - Combine multiple field conditions.
  - Query subdocuments efficiently.
  - Focused filtering by department and performance.

## 7. Advanced Aggregation (Challenge Level)

**Q13:** - For each faculty member, list the names of all students enrolled in their courses along with average marks per student per faculty.

**Query:** -

```
db.faculty_full.aggregate([
  {
    $lookup: {
      from: "courses_full",
      localField: "courses",
      foreignField: "_id",
      as: "courseInfo"
    },
    $unwind: "$courseInfo",
    $lookup: {
      from: "enrollments_full",
      localField: "courseInfo._id",
      foreignField: "course_id",
      as: "enrolledStudents"
    },
    $unwind: "$enrolledStudents",
    $lookup: {
      from: "students_full",
      localField: "enrolledStudents.student_id",
      foreignField: "_id",
      as: "studentInfo"
    },
    $project: {
      _id: 0,
      facultyName: "$name",
      studentName: {
        $arrayElemAt: [
          "$studentInfo.name",
          0
        ],
        marks: "$enrolledStudents.marks"
      }
    },
    $group: {
      _id: {
        facultyName: "$facultyName",
        studentName: "$studentName"
      },
      averageMarks: {
        $avg: "$marks"
      }
    },
    $project: {
      _id: 0,
      facultyName: "$_id.facultyName",
      studentName: "$_id.studentName",
      averageMarks: 1
    },
    $sort: {
      facultyName: 1,
      studentName: 1
    }
  }
])
```

**Output:** -

```
Atlas atlas-idr26g-shard-0 [primary] project> db.faculty_full.aggregate([
  {
    $lookup: {
      from: "courses_full",
      localField: "courses",
      foreignField: "_id",
      as: "courseInfo"
    },
    $unwind: "$courseInfo",
    $lookup: {
      from: "enrollments_full",
      localField: "courseInfo._id",
      foreignField: "course_id",
      as: "enrolledStudents"
    },
    $unwind: "$enrolledStudents",
    $lookup: {
      from: "students_full",
      localField: "enrolledStudents.student_id",
      foreignField: "_id",
      as: "studentInfo"
    },
    $project: {
      _id: 0,
      facultyName: "$name",
      studentName: {
        $arrayElemAt: [
          "$studentInfo.name",
          0
        ],
        marks: "$enrolledStudents.marks"
      }
    },
    $group: {
      _id: {
        facultyName: "$facultyName",
        studentName: "$studentName"
      },
      averageMarks: {
        $avg: "$marks"
      }
    },
    $project: {
      _id: 0,
      facultyName: "$_id.facultyName",
      studentName: "$_id.studentName",
      averageMarks: 1
    },
    $sort: {
      facultyName: 1,
      studentName: 1
    }
  }
])

[{"averageMarks": 90, "facultyName": "Alexis Stone", "studentName": "Anthony Zavala"}, {"averageMarks": 93, "facultyName": "Alexis Stone", "studentName": "Barbara Jones"}, {"averageMarks": 69, "facultyName": "Andrew Mcmahon", "studentName": "Dr. Michael Griffin Jr."}, {"averageMarks": 81, "facultyName": "Andrew Mcmahon", "studentName": "Megan Taylor"}, {"averageMarks": 52, "facultyName": "Ann Johnson", "studentName": "Colleen Todd"}, {"averageMarks": 59, "facultyName": "Ann Porter MD", "studentName": "Benjamin White"}]
```

- Multi-level joins using \$lookup.
- \$addToSet to avoid duplicate student names.
- \$avg to compute average marks per faculty.
- Real-world aggregation chaining.

**Q14:** - Show the most popular activity type (e.g., Hackathon, Seminar, etc.) by number of student participants.

**Query:** -

```
db.activities_full.aggregate(  
[ { $group: { _id: "$type", participants: { $sum: 1 } } },  
{ $sort: { participants: -1 } },  
{ $limit: 1 } ])
```

**Output:** -

```
Atlas atlas-idr26g-shard-0 [primary] project> db.activities_full.aggregate( //Name: Ajay Chauhan, Registration No:- 1240258047  
... [ { $group: { _id: "$type", participants: { $sum: 1 } } },  
... { $sort: { participants: -1 } },  
... { $limit: 1 } ])  
...  
[ { _id: 'Seminar', participants: 35 } ]  
Atlas atlas-idr26g-shard-0 [primary] project> |
```

- \$unwind to count array elements.
- \$group and \$sum for totals.
- \$sort to rank results.
- Identify “most popular” entities.
